

Devon Wells

Principal Software Engineer

dev@wlls.dev · github.com/devdumpling · linkedin.com/in/devon-a-wells

Frontend and platform engineer: design systems, performance, and the tooling that helps teams ship. Recently bringing AI chat into consumer healthcare apps.

EXPERIENCE

Judi Health (Capital Rx) / Amino Health

Feb 2025 - Present

Principal Software Engineer

- Built an AI chat experience integrating Judi's in-house AI into consumer apps
- Modernized frontends across all Judi Care consumer products (50M+ plan members)
- Architected an accessible, tokenized, multi-tenant design system (Tailwind, shadcn, Base UI)
- Rebuilt Amino's legacy Flask/React 16 app in Next.js 15, React 19, Tailwind, and shadcn
- Led metrics-driven development with analytics and observability integrations (OTel, Grafana, PostHog, Pendo)
- Cut the JS payload from multiple megabytes to under 500 KB, speeding page loads on marginal devices
- Established full test coverage across user journeys with Vitest, Playwright, Turborepo, and pnpm, cutting CI feedback from hours to minutes
- Architected BFF layer enabling a thin client while keeping backend services decoupled

GoodRx

Jan 2022 - Feb 2025

Principal Software Engineer

2024 - 2025

- Modernized legacy monolithic frontend as standardized Next.js 13, React 18, and GraphQL
- Architected Tailwind and shadcn-based design system
- Migrated 1M+ lines of coupled legacy components into a modern monorepo
- Created custom CLI for orchestrating common frontend tasks
- Built a documentation platform that transformed the company's knowledge culture
- Led core pricing funnel rebuild, aligning three siloed teams and solving multi-year blockers
- Led and organized the Frontend Guild, community of practice

Engineering Manager

2023, nine months

- Managed Application Platform Frontend team while continuing architecture contributions
- Returned to IC, choosing hands-on craft over the management track

Lead (Staff) Software Engineer

2022 - 2023

- Removed 2M+ lines of dead code, cutting build times by more than ten minutes
- Rearchitected CI/CD from Lerna to Turborepo and pnpm, reducing the pipeline from 2+ hours to 15 minutes
- Restructured the monorepo for decoupled contributions
- Transformed the team's reputation from "gatekeepers" to the highest-performing engineering team in 18 months
- Hosted an internal engineering podcast, fostering community and knowledge sharing

Everything But The House

Mar 2021 - Dec 2021

Senior Software Engineer / Frontend Team Lead

- Built a React and Next.js e-commerce platform for estate sales
- Implemented a new design system for consistent, accessible UI
- Built typed utility libraries

American Electric Power

Dec 2019 - Mar 2021

Software Developer

Modernized legacy applications to Lit and Polymer 3. Delivered Oracle Data Analytics Cloud solutions, PHP widgets, and RESTful APIs.

Maydm

Aug 2016 - Nov 2019

Technology Coordinator / Project Manager

One of three employees at a STEM education nonprofit. Built a CS teaching platform (700+ students, 3rd–12th grade), and led operations and technical direction. Later launched the e-commerce site for Pioneer Possibilities, the org's spin-off into physical activity kits for underrepresented students.

Freelance Web/App Development

2011 - 2015

EDUCATION

Oberlin College

2015

Bachelor of Arts, Computer Science

TOOLKIT

LANGUAGES	TypeScript, HTML, CSS, Go, Python, Odin, Gleam, Rust, SQL
FRAMEWORKS	Datastar, Svelte, React, Solid, Next.js, TanStack, Astro, Tailwind, FastAPI
RUNTIMES	Node, Bun, Deno, BEAM
TOOLING	Turborepo/Nx, pnpm, uv, oxc, Playwright, Vite, Nix, Sentry, Grafana, Figma, Terraform
DATA	Postgres, SQLite, Zero
PLATFORMS	AWS, GCP, Cloudflare, Docker, Kubernetes, OrbStack
AI	Claude, Pi, Custom harnesses

RECENT PROJECTS

wlls.dev

This site. A ground-up Odin server on a \$7 VPS that renders every page once at startup and drives the terminal, guestbook, and live chat as server-rendered HTML over SSE with Datastar.

Odin Datastar SQLite Nix Caddy

Snowglobe

Interactive Year in Review template with real-time presence (live cursors, pixelated avatars), photo clusters, a guestbook, and easter eggs. Deduped cursor broadcasts every 50ms and spring-based animations keep it smooth. Notes.

SvelteKit TypeScript Gleam BEAM WebSockets Postgres

devex

A CLI for structured self-experiments on your workflow. Define hypotheses, work in time-boxed blocks, and collect subjective and objective data. Born from wanting actual data on AI-assisted coding instead of anecdotes. Notes.

TypeScript Deno SQLite
